Objective

Data Scientist and Software Developer with solid experience in building scalable Artificial Intelligence solutions, data engineering, and full-stack web applications. Proven track record of technical autonomy in deploying advanced Computer Vision architectures (Multi-input/Multi-output) and designing complex systems powered by Large Language Models (LLMs), Multi-Agent frameworks, and RAG. Highly analytical professional focused on transforming complex business logic into efficient automation that eliminates manual workflows and drives strategic value for engineering teams.

Core Technical Skills

- Languages: Python (Advanced), JavaScript, SQL, R, HTML, CSS.
- AI & Data Engineering: Machine Learning, Computer Vision, LLMs, RAG (Retrieval-Augmented Generation), Multi-Agent Orchestration, Pandas, Scikit-learn, NumPy, Matplotlib, Statsmodels.
- Frameworks & Web Development: React, React Native, Node.js, Streamlit, Flask.
- Tools & Infrastructure: BigQuery, Power BI, Git, Docker, VS Code.
- Languages: English (C2 - Native Fluency / Native-like Proficiency).

Professional Experience

Instituto de Pesquisa Eldorado | Data Scientist / Technology Specialist

May 2025 – Present

- Act with total technical autonomy to boost the operational efficiency of internal teams through advanced Machine Learning, Generative AI, and Computer Vision solutions.
- Led the self-taught development, retraining, and optimization of complex Computer Vision architectures using multi-input and multi-output models, managing data governance for a robust dataset of over 40,000 images with Python.
- Designed and deployed Generative AI systems based on Multi-Agent frameworks with intelligent orchestration and RAG (Retrieval-Augmented Generation) tailored for automated querying across large-scale structured databases.
- Engineered a Multi-Agent AI solution focused on extracting device User Interfaces (UI) to achieve full end-to-end software test automation, mitigating 100% of the manual regression efforts for QA teams.
- Proactively conceptualized and built interactive Streamlit applications for scientific data visualization, enabling seamless data validation and insight sharing with project stakeholders.
- Authored comprehensive technical documentation for AI pipelines, ensuring robust governance, reproducibility, and smooth cross-functional communication across multiple engineering teams.

Universidade de São Paulo (USP) | Academic Researcher / Data Scientist (FAPESP)

May/2019 – December/2021

- Spearheaded statistical modeling projects, taking ownership of processing, cleaning, and interpreting massive volumes of experimental data in real time.
- Developed custom Python scripts to automate data pipelines, exploratory data analysis (EDA), and the validation of complex mathematical models.

LS Consultoria Júnior | Founder & Project Manager

August/2016 – December/2017

- Structured and launched a junior consulting firm from the ground up, directing strategic planning, initial corporate governance, and end-to-end project execution.

Key Projects

SOS Câncer de Pongaí Mobile App (React / React Native / Python)

February/2025 – Present

- Serving as Technical Lead for frontend development and database architecture for a social impact application, optimizing user registration workflows, secure donation management, and mobile accessibility.

Education

B.S. in Systems Analysis and Development (A.D.S.)

Descomplica Faculdade Digital | December/2024 – July/2027 (Expected)

Advanced Data Specialization (Jornada de Dados)

Laboratoria | June/2025 – October/2025

Master of Science (M.Sc.) – Data Analysis & Statistics Focus

University of São Paulo (USP) | March/2019 – November/2021

Bachelor of Science (B.S.) in Engineering

Federal University of São Carlos (UFSCar) | March/2014 – December/2018
