Objective

Data Scientist and Software Developer with a unique blend of rigorous academic research and practical software engineering. Transitioning from a highly autonomous, year-long R&D internship where I engineered AI solutions, I am seeking a Junior/Mid-level Data Scientist role. I bring proven capability in developing scalable Artificial Intelligence solutions, optimizing data engineering pipelines, and building full-stack web applications. My analytical background enables me to design complex systems powered by Large Language Models (LLMs), Multi-Agent frameworks, and Computer Vision, transforming complex business logic into efficient automation that drives strategic value for engineering teams.

Core Technical Skills

- **Languages:** Python (Advanced), JavaScript, SQL, R, HTML, CSS.
- **AI & Data Engineering:** Machine Learning, Computer Vision, LLMs, RAG (Retrieval-Augmented Generation), Multi-Agent Orchestration, Pandas, Scikit-learn, NumPy, Matplotlib, Statsmodels.
- **Frameworks & Web Development:** React, React Native, Node.js, Streamlit, Flask.
- **Tools & Infrastructure:** BigQuery, Power BI, Git, Docker, VS Code.
- **Languages:** English (C2 - Native Fluency / Native-like Proficiency), Portuguese (Native).

Professional Experience

Instituto de Pesquisas ELDORADO | Data Scientist (Intern)

May 2025 – Present

- Acted as a fully integrated member of the engineering team, operating with total technical autonomy to develop and optimize advanced Machine Learning, Generative AI, and Computer Vision solutions.
- Engineered an interactive Streamlit application for scientific data visualization and validation, automating manual workflows and reducing data validation time by 50%.
- Led the self-taught development and optimization of complex Computer Vision architectures (multi-input/multi-output models) as highly viable contingency solutions, managing data governance for a robust dataset of over 40,000 images in Python.
- Designed Proof-of-Concept (PoC) Generative AI systems based on Multi-Agent frameworks with intelligent orchestration and RAG for automated queries in large structured databases.
- Developed a Multi-Agent AI solution for extracting User Interfaces (UI) from devices, significantly mitigating manual regression efforts for QA teams.
- Authored comprehensive technical documentation for AI pipelines, ensuring robust governance, reproducibility, and fluid communication across engineering teams.

Universidade de São Paulo (USP) | Academic Researcher / Data Scientist (FAPESP)

March 2019 – November 2021

- Spearheaded statistical modeling projects, taking ownership of processing, cleaning, and interpreting massive volumes of experimental data in real time.
- Developed custom Python scripts to automate data pipelines, perform Exploratory Data Analysis (EDA), and validate complex mathematical models.

LS Consultoria Júnior | Founder & Environmental Project Manager

August 2016 – December 2017

- Structured and launched a junior consulting firm from the ground up, directing strategic planning, initial corporate governance, and end-to-end project execution.

- Secured initial projects and partnerships, demonstrating strong leadership, project management, and problem-solving capabilities.

Key Projects

SOS Câncer de Pongaí Mobile App (React / React Native / Python)

February 2025 – Present

- Serving as Technical Lead for frontend development and database architecture for a social impact application, optimizing user registration workflows, secure donation management, and mobile accessibility.

Education

B.S. in Systems Analysis and Development (A.D.S.)

Descomplica Faculdade Digital | December 2024 – June 2027 (Expected)

Advanced Data Specialization (Jornada de Dados)

Laboratoria Brasil | June 2025 – November 2025

Master of Science (M.Sc.) – Data Analysis & Statistics Focus (Physical Chemistry)

Universidade de São Paulo (USP) | March 2019 – December 2021

Bachelor of Science (B.S.) in Environmental Engineering

Universidade Federal de São Carlos (UFSCar) | March 2014 – December 2018
